

Environmental, Health and Safety Statement

Maxar Technologies believes in being a good steward of the environment and our team members' health and safety, consistent with our purpose and values. We are committed to sustaining a strong environmental, health and safety (EHS) program that focuses on team member health and safety, pollution prevention, and continuous improvement of programs that ensure compliance and demonstrate Maxar's dedication to responsible business practices. Maxar aims to leverage strong EHS management and incorporate new understandings in the science of environmental, health and safety to carry out the following policy objectives:

- Strive for full compliance with federal, state and local regulations and customer requirements;
- Implement effective and established environmental, health and safety practices to protect the workplace and surrounding communities;
- Seek opportunities for the prevention of pollution by minimizing the amount and toxicity of waste, discharges and emissions, including greenhouse gases, from our facilities;
- Seek to eliminate the use of ozone depleting compounds and hazardous air pollutants;
- Train employees to recognize the environmental health and safety aspects of their positions;
- Take proactive measures to optimize the use of natural resources and avoid industrial accidents;
- Implement feasible engineering controls and sustainable business practices to prevent and correct any workplace safety issues.

Maxar is dedicated to continually strengthening our EHS policies and programs and constantly advancing our commitment to safe working conditions and sustainable practices.
